

IMPACT RECOVERY SYSTEMS

Flexible bollards, signposts and frames

Delnorth offer a highly durable range of passively safe self recovering flexible signposts, frames and bollards. When hit by vehicles, these products flex to absorb the impact then recover to their original position, even after repeated impacts.

RPS RETRO POST®

- Made from high grade rubber compound with reinforced steel cables for superior durability.
- Perfect for high-impact traffic zones, Retro Post® is self-returning, flexible, and available in multiple heights.
- Easy to install into existing or new sockets, the Retro Post® is available as a surface or socket mount installation.

INLINE BOLLARD

- The Dura-Post® 360° Inline Bollard has a spring reinforced impact resistant polyurethane flexible joint which provides strength and durability, even for galvanised steel or aluminium posts.
- Multidirectional and impact absorbing, the inline bollard is easy to install and has vandal resistant fittings.
- Installation options include surface mount, ground socket or inground drivable anchor.

DuraPost

POLYFLEX™

- Manufactured from premium grade injection moulded polyurethane the Delnorth Poly-Flex™ range is UV stabilised and thermal resistant from -50° to + 60°.
- Significantly reducing replacement costs, Poly-Flex™ is strong and flexible, absorbs impact and returns to original position time after time making it perfect for high impact areas.
- Poly-Flex™ can be installed with ease and is available as a surface or socket mount.
